

T = technical point > translation, or stop or question or speak

Ice breaker

Try to energize ourselves, we need place to move in the room
push apart the table to have a square and put them back afterward
Each has a number and falls on the floor when number is called
the rest of the group has to catch up the person

Summary of Yesterday :

Crossed interview: Each participant told a story of good & a bad event in Museomix > which lessons we learned from those event ?

Build Museomix dream`

Today creating a common vision
Which goals & how to reach them ?

Let's go to essential thing, don't be too perfectionist : today is a big picture of what we want to go,
not to go to each details

Share what is essential

No judgement, everybody has good intentions
Good listening
Don't cut the others, raise a hand if you need to talk

Program of today :

1. Synthesis of yesterday
Questions / answers on some point to clarify
2. Inspired of Dragon dream to share our goals > goal : share common vision
Think interco and "global"
Each one write his/her dream about MSX and interco
Break
3. Commons goals / using collective intelligence
4. Plannification > tasks we need to accomplish to reach the goal

Synthesis

Add if needed

1. Dev/orga of community
> ideas and questions : motivation of volunteers, DOing legitimacy, local matters (socially for Italy, as they are rising),
2. Governance : nobody decide , process decision not clear, importance of federating together, how to take responsibility for interco, intellectual rights
Idea to having 'coins' to retribute/reward the work of the volunteers > not a salary but recognizing the work of someone

Question ?

Museomix Summer Camp : the idea is also to take time to talk about the international Museomix Community & not only about the event itself

Asso MSX ? Global ? the "statuts" of the association : nowhere to be found
not easy to be involved, everybody could collaborate

The Museomix association : is in France, they are no members, it's just an office

2 people involved : President/Secretary/Tresorier

Administration Board

Feeilng from Brasil : lot of interest from the Brasil community, try to contact the global ? How to get the contact ? Need to meet somebody to know how it's working, if not going into a community to meet specific people, hpw to meet and know how it works ?

For a new community, if you're not very motivated, you can't find the information

Desk : President /
Aministration board

No members

Just protecting the Museomix name > co-founders

Asso created to take the money from the partners for the first event

Using Museomix is free, share to a museum which want to be remixed, chart for this

3 days, not a command, sharing commons, free

Last year : Paris meeting > problem raised, like local community can be members of association
Legal papers of asso : every new members must be agreed by the desk

Earlier : fee of 1000 euros to pay a coordinator, and the organization community

Last year : coorganization between communities to share the action, no fee payed

Deléguee générale : Juliette Giraud

Creative museum project with Museomix association, ask to others on community forum to come
European project with independant financing supported by MSX

Website : new one paid by MSX global,

Question : no one was everv in responsability for organizing ? Do we need a community builder ?

Ask was maid, but no understood. Where is the money coming from ? Do we need more facilitation that coordination, or being each community as satellites ?

For new starter community, it's complicated to find someone, but it's like that for years, it is because you know people

Too much personalizing to one
Each can give something for globally

Let's do concrete things :)

Dream process

Your vision for the intercommunity of Museomix, Museomix

Local/global

Local

The question is : How should museomix look like to be fully satisfactory ?

Answer individually, on the post it

No time to note everything, focus on the essential !

let it go ! no judgement !

MSX 2027

Some ideas...

museum today = pyramidal / in 10 years, owned by cooperative, collaborative process

all year long, msx process, laboratory + exhibition

inclusive mission

coworking community, 7 museums place, global from one to another place

Change everything in the museum for one year

people that do companionship in museum, arriving on one event and stay for their companionship

local orga and more active go from one place to another

The ideas of dream of the dragon :

coordination of community builder, no global direction, not compatible, kind of coordination, with a community builder : we need to decide together

OR we choose we rely on local orga to do what they can by themselves, let's get away from ambiguity

FUN!

Responsibility and duty shared between different countries and local

Clear vision of MSX format, and a way to explain it, more explicit

Shared documentation, transparency, explicit, clear process

Rule : "The one who does is the right one" = " If I say it I do it, If I do it I am right "

Open governance from local to global > open process to decide together, not virtual entity, to say yes or not, complete open organization, open to know who make what, transparency

Tools to enable symmetry of information about intercommunity processes and roles > same level of information for everybody

Clear identification of who does what

Shared responsibility

all communities on the same level
local+ local+local+local...= global > global composed by local
msx = network of independent local actors
listen new ideas
possibility to make museomix evolve together
not forget the freedom of the project. Is it too much? Need of something globally, need local
freedom, based on msx freedom direction > space for yes
a msx gathers to share
decision from bottom (active communities)
at least one annual meeting with all the communities
total transparency (who do what?) (the money)
Having a common tools for communication: all communities has social network, no guidelines,
common strategy for all the time (external/internal)
Having common discourse about what is MSX, when you participate you have the same vision, but
for new one, evryone has an explanation, but we don't live it in the same way, same explanation, but
not in the same way > have a common definition of what is museomix
Link between all the museums in the world
shared methods between local communities and create together
Feel free to use and shared to format
can we go outside museums? Heritage sites ? Mediation?
part taking understand more clarly (link to one another), understanding clearly the format, more
connexion, horizontal, share role, shifting to get organize naturally
building and updating
more voices more faces> diversity, represation
have difrent meeting and project with difrent communities all over the year
collaborative federation of local associations
clear rules "who does what ?"
one more structured organisation, but... not too much
No complexity but fun
actual open transparent documenting
A communicating museomix inside & outside, globaly & localy, all year long
sharing the regional informations
Get a global association pen to all local association > all members of the global association are
members of local associations
one person of each local community needs to get a chance to exchange and get trained once a year
each community invite the members of the global association to participate
local association needs to exchange and spread all what she does on the global tools
Museomix should be clearer and better explained to museum audience and to people who don't go
to the museum >enhance communication
local community need some or one repressentative(s) in the global community
global decisions should be taken by members by the different local communities in a universal
language
global orga should not be personnalized – transparency on the global
Event Museomix = a small kit of rule & exchanges of good practices (scenarios, spaces, ...)
collaborative smoothy fonctionning with ongoing dialog
With a basic scheme to think togheter
Partners teams responsables for chosen tasks

What do the assembly want ?

1. concrete proposal: next assembly? Make a consent/ emergent process, discussion, living process, together and small groups process, with different sequence : why what how (proposal) > see if why is shared, try to get the essential, then 5 minutes
Rising up proposal >

Why : to answer many thing read about necessity to be horizontal

Details / question : answer to os it about better association of local to global
next general assembly, all communities invited to GA, legally, if not a member, no way to participate to GA > adress the problem then

What: next general assembly of museomix association, all local communities, invited to participate to general assembly > put all partners together see what happened

How: one of present community to organize general association, meeting

> a local community organizes this GA if not in France ? legally, must be formal, but in real life, this can be decisionary

> on behave of what can you go and talk ? if you're not in the board, no way. How to be inclusive, to let new people enter the association

> it is possible to be at a GA and become part of the desk (but must be agreed by the board)

> where ? must be adressed legally

not just a discussion like here, but in the way of taking decision, will be a consensus, but not for one day, for ever

Association? Constitutive assembly with different local association, we do not have the legetimity toorganize. We organize ourselves our assembly and invite the association. We must be independent, the better to have common status for international > go from scratch and include global association, they are the part of us

GA is the place to change the statuts > in belgium there is a statuts for international group.

If we cannot be in the board, let's invite the board
asso bigger than the historical asso to protect the name

If we only talk about organization > stronger canvas to do tomorrow

CA of association, are not engaged but goodwilling, we must focus on be inclusive, and how we do things

It's odd to have 2 people at the top of the association that are not active in real life > we don't know them.

That was a choice to have this organic structure at the service of people that are working. They are not supposed to attribute funds.

subsequent proposal : How to reach all those dreams ? Including Jean-Pierree's proposal

A group of persons in charge of the facilitation of the international community > make sure that everything is going on ok, letting people do what they want but 'activate' them > identified group with this responsability > to decide tommorow ?

Make canvas (frame of work), intercommunity role and function then > decision

OR/and

Let's decide to create the group and process > decision

WE WANT BOTH PROPOSALS TO BE DISCUSSED TOMMOROW

What would be the exact role of this person ? > a profile can be suggested by Samuel ?
Condition : the international community has to decide the exact role of that person
